

Treasury Navigator Secure Browser Transition

As previously shared, all current Atlantic Capital Exchange (ACE) users will transition to SouthState's Treasury Navigator® in July. As we prepare for this transition, please reference the information below which provides guidance for actions you need to take now, and as we get closer to the system conversion.

All ACE Users

All ACE users will need to download SouthState's Treasury Navigator® Secure Browser by **July 22, 2022**. Both Atlantic Capital and SouthState use the same online banking platform with similar features, functionality and navigation.

Treasury Navigator® (TNAV) is the branded name for SouthState's online cash management system. The security within the platform includes a proprietary browser instead of a commercially available browser like Internet Explorer (IE), Chrome, Firefox, Safari, etc. The proprietary browser prevents any other tabs from being open during the banking session which is a deterrent against common malware such as account takeover or man-in-the-middle attacks. Secure Browser is a one-time install. Since the installation process will assume the administrative rights to the computer, we recommend that your IT staff be available for additional support.

Each user in your company will be required to install Treasury Navigator® Secure Browser from one of the options below:

Windows Based Users

- [Click here](#) to install Secure Browser.
- If you prefer, you may copy and paste this link into a blank URL line:
https://treasurynavigator.southstatebank.com/msb/download/southstate_browser64.exe
- If you are unable to download the Secure Browser using the above link, please copy and paste the following link for 32 bit operating systems into a blank URL line:
https://treasurynavigator.southstatebank.com/msb/download/southstate_browser32.exe

MAC Users

- [Click here](#) to install Secure Browser.
- If you prefer, you may copy and paste this link into a blank URL line:
https://treasurynavigator.southstatebank.com/msb/download/southstate_browser.pkg

Once Secure Browser is successfully installed, an icon will appear on your desktop.

Next Steps

During the system conversion weekend, July 22 – July 24, we will send you your login credentials for Treasury Navigator®.

If you have any questions, please contact your Treasury Sales Officer, or Treasury Services Support at (404) 995-5861 or send an email to TreasuryServicesSupport@AtlCapBank.com.

Registration

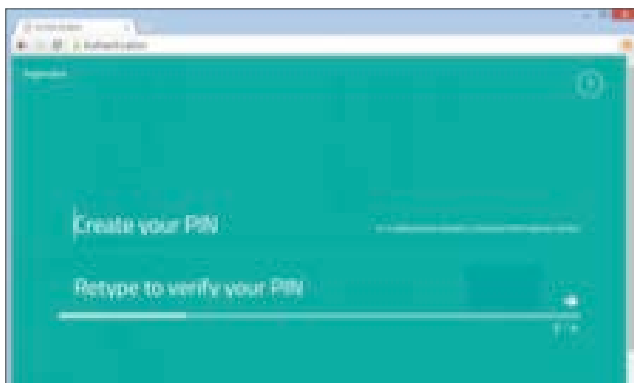

1. After performing the reboot as needed, launch Treasury Navigator® Secure Browser by locating and selecting the new icon that has been created on the desktop, or in the Applications folder if installed on a Mac.

2. Then enter the Activation Key that has been provided by the bank and select the **Continue** arrow.

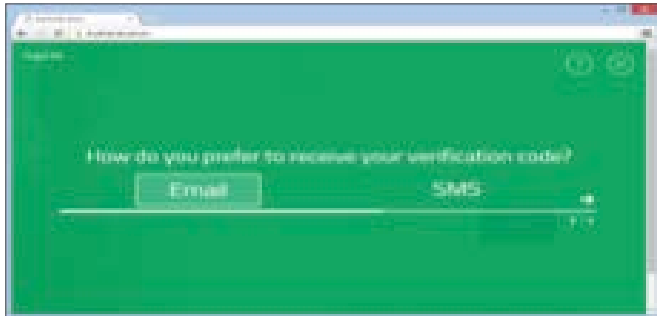

3. Next create the **PIN** you will use to log in, and select the **Continue** arrow. Please make note of the PIN as you will use it to log in following registration. PIN must be between 6 to 12 characters, letters and numbers only.

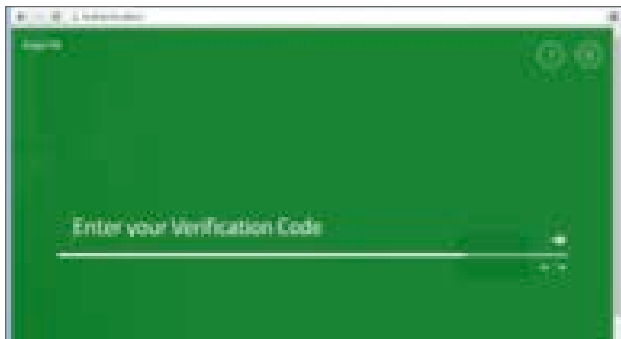

4. To confirm your identity, a user verification code will be delivered to you that must be entered on the next screen. Select if this code should be delivered via **Email** or **SMS**, then select the **Continue** arrow.

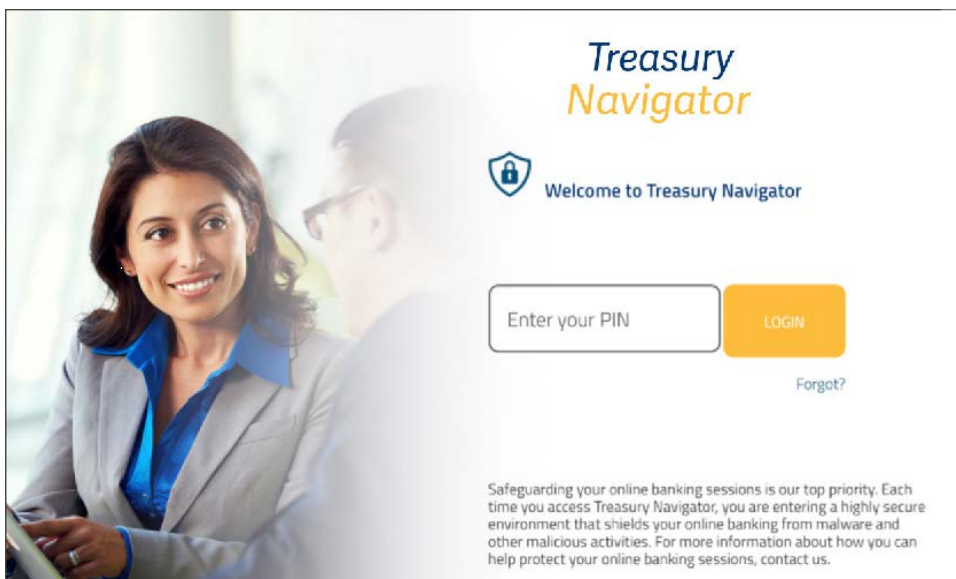

NOTE: Email is the default method. SMS delivery will not be available unless this has been configured within the user's profile by the bank or company administrator.

5. Enter the user verification code that has been delivered, and then select the **Continue** arrow.

6. Installation and registration are now complete. Use the PIN that was created in registration step 2 to log in and access your online banking.

Treasury Navigator® Secure Browser Homepage

Moving around through Treasury Navigator® is very intuitive. From the **Secured Apps** displayed (example below), you are able to select from a customized selections menu.
